

Model Growing Number Patterns

Grade 1 · Lesson pack 8 CLASSROOM LESSONS

4	mathematics and math-through-reading lessons
4	reading and language lessons

30 minutes per lesson

Each lesson includes a teachable sequence, support and extension, an observable checkpoint, a functional student page, required printable resources, and a teacher key.

Where this fits in your year · Florida

GRADE 1 ADDITION RELATIONSHIPS AND STORY COMPREHENSION Place this pack in Florida's Grade 1 work with addition and story sequence after children can count a set reliably. Lessons 1 and 2 make totals to 16 visible with counters and cards. In Lesson 1, students build two equal groups, join them, count the total, and record a matching addition equation. Lessons 3 and 4 connect ordered story events to the number chain and ask children to describe 4 and 8 using more, fewer, double, and half. The reading lessons fit beside early comprehension and oral-language work. Students identify useful details in a functional sign, infer a feeling from words and actions, distinguish requests, offers, and thanks in dialogue, and retell the problem, response, and resolution.

No ELA code is printed because a verified jurisdiction-specific ELA source was not supplied. Treat the mathematics reference below as preparation. The pack does not ask students to interpret and solve an unknown word problem, develop all addition and subtraction situations, vary the unknown position, or demonstrate fluency. Add those elements separately when the broader expectation is the instructional goal.

STRONGEST CURRICULUM CONNECTIONS - OUR SUMMARY

CLASSIFICATION	PREPARES FOR · Lesson 1
VERIFIED	Solve addition and subtraction real-world problems using objects,
REFERENCE	drawings, or equations to represent the problem (MA.1.AR.1.2).
STUDENT EVIDENCE	Students build a concrete equal-group model and record an addition equation in the story context.
LIMITATION	Students reproduce a known total; they are not asked to interpret and solve an unknown real-world problem.

Teacher must add

Pose a real-world addition or subtraction problem with an unknown and require students to choose and use an object, drawing, or equation representation.

Review status: Ready · Careful curriculum placement with limitations stated.

Teacher overview

This book offers a strong Grade 1 bridge between story sequence and a visible number pattern. The pack stays with concrete models and language children can demonstrate: equal groups, counting to 16, more and fewer, half and double, useful details, feelings supported by evidence, dialogue purposes, and ordered retelling.

PREPARATION

Use the original book or licensed text. Prepare only the short passages named in each lesson; do not display a passage with its answer already stated. Print the student and resource pages before teaching. For Lesson 2, copy the four rosters from the book onto blank name cards and verify every recurring name before class.

LESSON MAP

1. Two Signs Are Twice One Sign
2. Count the Names, Check the Number
3. Put the Signs Back in Order
4. Four More and Half as Many
5. Lost Dog: What a Sign Has to Say
6. A Shaky Voice: How the Book Shows Sadness
7. I'll Make Another One: Words People Use to Help
8. First, Then, At the End

Math skill Math skill Math through reading Math through reading Reading and language Reading and language

Reading and language

Reading and language

1. Two Signs Are Twice One Sign

MATH SKILL	
TIME	30 minutes
OBJECTIVE	Build doubles to 16 as two equal groups and record each double as an addition equation.
STUDENT PRODUCT	A completed doubling mat and four equations: $1 + 1$, $2 + 2$, $4 + 4$, and $8 + 8$.
MATERIALS	The book; 16 counters per pair; printable doubling mat; pencil.
BOOK EVIDENCE	The story moves from one sign to two, then names $2 + 2 = 4$, $4 + 4 = 8$, and $8 + 8 = 16$.

Lesson sequence

Connect ·	4 min
-----------	-------

Reread the moment when a second sign is “twice as good as one.” Ask: What must be true of the two groups when we make a double?

Build ·	9 min
---------	-------

Place one counter in the first row and make an equal second row. Join and count. Repeat with 2, 4, and 8 in the first row.

Record ·	8 min
----------	-------

After each build, write the matching addition equation. Read each equation as “double ____ is ____.”

Check ·	5 min
---------	-------

Compare two rows of 4 with one row of 8. Identify which model proves $4 + 4 = 8$ and explain why.

Close ·	4 min
---------	-------

Name the sign total at each rung and state what stays the same in every doubling step.

WATCH FOR

A child may add two instead of making a second equal group. Match the second row counter-for-counter before counting.

SUPPORT

Stop after $2 + 2 = 4$; keep both rows visible and aligned.

EXTEND

Cover the second row. Predict the total, uncover, and verify.

Student page · Two Signs Are Twice One Sign

Name: _____

_____ TODAY I WILL Build doubles to 16 as two equal groups and record each double as an addition equation.

Start with 1. Make an equal second row.

Equation: _____ + _____ = _____ Start with 2. Make an equal second row.

Equation: _____ + _____ = _____ Start with 4. Make an equal second row.

Equation: _____ + _____ = _____ Start with 8. Make an equal second row.

Equation: _____ + _____ = _____

Date: _____

Teacher key · Two Signs Are Twice One Sign

EXPECTED RESPONSE

Equations: $1 + 1 = 2$; $2 + 2 = 4$; $4 + 4 = 8$; $8 + 8 = 16$. Two rows of 4 prove $4 + 4 = 8$ because they show two equal groups of four.

WHAT MAKES THE RESPONSE SECURE

The student completes the stated action accurately and explains it with visible evidence from the counters, cards, organizer, or book. Accept oral responses, teacher scribing, manipulatives, drawing, or pointing when the mode preserves the mathematical or reading demand.

COMMON CORRECTION

A child may add two instead of making a second equal group. Match the second row counter-for-counter before counting.

2. Count the Names, Check the Number

MATH SKILL	
TIME	30 minutes
OBJECTIVE	Count a growing set to 16 with one-to-one correspondence and verify a stated total.
STUDENT PRODUCT	Four organized name-card sets correctly counted as 2, 4, 8, and 16.
MATERIALS	The book; teacher-prepared name cards copied from the four rosters; printable count mats.
BOOK EVIDENCE	The book prints rosters beside stated totals, allowing students to count the names and test each printed number.

Lesson sequence

Connect ·	4 min
-----------	-------

Reread the first roster. Ask how a reader could check whether the number beneath it is correct.

Count ·	8 min
---------	-------

Place one card for each named child in a row. Touch and move each card once while counting.

Grow ·	8 min
--------	-------

Repeat with the rosters for 4, 8, and 16. Arrange counted cards in rows of four.

Check ·	6 min
---------	-------

Partners recount one another's 16-card set from a different starting card. Explain why the total does not change.

Close ·	4 min
---------	-------

Complete: "The printed total is reliable because ____."

WATCH FOR

Do not make duplicate cards for the same child. Before teaching, copy each printed name exactly and confirm recurring names.

SUPPORT

Work with 2, 4, and 8; provide cards already arranged in rows.

EXTEND

Predict the next total in the pattern and justify 32 without building every card.

Student page · Count the Names, Check the Number

Name: _____ Date: _____

TODAY I WILL

Count a growing set to 16 with one-to-one correspondence and verify a stated total.

Place one copied name card in each box. Touch and move every card once as you count.

Roster with printed total 2 My count: _____ Partner's recount: _____ Roster with printed total 4 My count: _____ Partner's recount: _____ Roster with printed total 8 My count: _____ Partner's recount: _____ Roster with printed total 16 My count: _____ Partner's recount: _____

Teacher key · Count the Names, Check the Number

EXPECTED RESPONSE

The verified totals are 2, 4, 8, and 16. A secure explanation says every card was counted once and only once; changing the starting card does not change how many cards are in the set.

WHAT MAKES THE RESPONSE SECURE

The student completes the stated action accurately and explains it with visible evidence from the counters, cards, organizer, or book. Accept oral responses, teacher scribing, manipulatives, drawing, or pointing when the mode preserves the mathematical or reading demand.

COMMON CORRECTION

Do not make duplicate cards for the same child. Before teaching, copy each printed name exactly and confirm recurring names.

- Put the Signs Back in Order

MATH THROUGH READING

TIME	30 minutes
OBJECTIVE	Sequence story events and connect each event to the growing totals 1, 2, 4, 8, and 16.
STUDENT PRODUCT	An ordered five-part story chain with a matching counter model beneath each event.
MATERIALS	The book; printable event-strip template; 16 counters per pair.
BOOK EVIDENCE	The sign-making events occur in a fixed story order and the totals increase along that sequence.

Lesson sequence

Connect ·	5 min
-----------	-------

Record five short sign-making events from the book on the printable strips. Read them aloud and listen for order clues.

Sequence ·	8 min
------------	-------

Pairs place the strips in story order and verify each placement in the book.

Model ·	8 min
---------	-------

Build the matching total beneath each strip: 1, 2, 4, 8, 16.

Diagnose ·	5 min
------------	-------

Move one strip. Students find the break using both story sense and number order.

Close ·	4 min
---------	-------

Explain why a correctly ordered story restores the number pattern.

WATCH FOR

Students may order only by numerals. Require one story clue for every placement.

SUPPORT

Use the first four events and mark the first and last positions.

EXTEND

Dictate a plausible sixth event and predict its total.

Student page · Put the Signs Back in Order

Name: _____

_____ TODAY I WILL Sequence story events and connect each event to the growing totals 1, 2, 4, 8, and 16.

Glue or copy the events in order. Draw or place counters beneath each event.

1. Event Model 1 counter here
2. Event Model 2 counters here
3. Event Model 4 counters here
4. Event Model 8 counters here
5. Event Model 16 counters here

Date: _____

Teacher key · Put the Signs Back in Order

EXPECTED RESPONSE

Correct order follows the five sign-making events as they appear in the book, paired with 1, 2, 4, 8, and 16. Evidence must include a story-order clue, not only the numerals.

WHAT MAKES THE RESPONSE SECURE

The student completes the stated action accurately and explains it with visible evidence from the counters, cards, organizer, or book. Accept oral responses, teacher scribing, manipulatives, drawing, or pointing when the mode preserves the mathematical or reading demand.

COMMON CORRECTION

Students may order only by numerals. Require one story clue for every placement.

4. Four More and Half as Many

MATH THROUGH READING

TIME	30 minutes
OBJECTIVE	Describe the relationship between 4 and 8 using more, fewer, double, and half.
STUDENT PRODUCT	A matched-row model and four accurate comparison sentences.
MATERIALS	The book; 12 counters per pair; printable comparison page.
BOOK EVIDENCE	Adjacent rungs in the book's doubling chain provide a concrete pair: 4 and 8.

Lesson sequence

Connect ·	4 min
-----------	-------

Display 4 counters and 8 counters in aligned rows. Ask what students notice before counting.

Build ·	7 min
---------	-------

Build a row of 4 and a row of 8 from the same starting line. Match the first four counters vertically.

Say it four ways · 10 min Complete the four comparison frames on the student page and check each against the unchanged model.

Check ·	5 min
---------	-------

Decide whether “Four is four fewer than eight” agrees with the same picture and explain.

Close ·	4 min
---------	-------

Choose the sentence that best matches the book’s word “doubling” and defend the choice.

WATCH FOR

Half means one of two equal parts, not simply a smaller number. Separate 8 into two matched groups of 4.

SUPPORT

Use two colours, one for each group of 4, and read the frames aloud.

EXTEND

Repeat all four comparisons for 8 and 16.

Student page · Four More and Half as Many

Name: _____

_____ TODAY I WILL Describe the relationship between 4 and 8 using more, fewer, double, and half.

Draw or place 4 counters and 8 counters in aligned rows.

8 is _____ more than 4.

4 is _____ fewer than 8.

8 is double _____.

4 is half of _____.

Which sentence best matches “doubling”?

Why?

Date: _____

Teacher key · Four More and Half as Many

EXPECTED RESPONSE

8 is 4 more than 4. 4 is 4 fewer than 8. 8 is double 4. 4 is half of 8. The book’s word “doubling” is matched most directly by “8 is double 4.”

WHAT MAKES THE RESPONSE SECURE

The student completes the stated action accurately and explains it with visible evidence from the counters, cards, organizer, or book. Accept oral responses, teacher scribing, manipulatives, drawing, or pointing when the mode preserves the mathematical or reading demand.

COMMON CORRECTION

Half means one of two equal parts, not simply a smaller number. Separate 8 into two matched groups of 4.

5. Lost Dog: What a Sign Has to Say

READING AND LANGUAGE

TIME	30 minutes
OBJECTIVE	Identify the purpose and useful details of a lost-dog sign.
STUDENT PRODUCT	A revised sign that adds at least two useful identifying or contact details.
MATERIALS	The book; printable sign-review and revision page; pencil or crayons.
BOOK EVIDENCE	The story embeds a lost-dog sign with a heading, Theo's name, descriptive information, and a location.

Lesson sequence

Notice ·	5 min
----------	-------

Compare the sign with the surrounding story paragraph. Name two ways the sign looks or sounds different.

Locate ·	7 min
----------	-------

Find the heading, Theo's name, a describing detail, and the location. State what each part helps a reader know.

Judge ·	8 min
---------	-------

Consider "very soft" and "likes peanut butter." Explain why neither is as useful for visual identification as colour, size, markings, or a collar.

Improve ·	6 min
-----------	-------

Revise the sign with two useful details. Use a safe contact method rather than a child's full home address.

Close ·	4 min
---------	-------

Complete: "A lost-dog sign needs ____ because ____."

WATCH FOR

A charming fact is not automatically identifying. Ask whether a stranger could use it to recognize the dog safely.

SUPPORT

Offer pairs of possible additions; have the student choose the more useful one and explain.

EXTEND

Explain why a phone number or trusted adult's contact is safer and more useful than a child's full address.

Student page · Lost Dog: What a Sign Has to Say

Name: _____ Date: _____

TODAY I WILL

Identify the purpose and useful details of a lost-dog sign.

Circle the details that help someone recognize or safely return a dog: colour · favourite food · size · very soft · collar · markings · trusted adult's phone number

DOG'S NAME

WHAT THE DOG LOOKS LIKE

LOST DOG

COLLAR OR TAG

LAST SEEN

SAFE CONTACT

Teacher key · Lost Dog: What a Sign Has to Say

EXPECTED RESPONSE

Useful answers include colour, size, breed, distinctive markings, collar/tag information, last-seen location, and a trusted adult's contact. "Very soft" and "likes peanut butter" are not strong visual identifiers.

WHAT MAKES THE RESPONSE SECURE

The student completes the stated action accurately and explains it with visible evidence from the counters, cards, organizer, or book. Accept oral responses, teacher scribing, manipulatives, drawing, or pointing when the mode preserves the mathematical or reading demand.

COMMON CORRECTION

A charming fact is not automatically identifying. Ask whether a stranger could use it to recognize the dog safely.

6. A Shaky Voice: How the Book Shows Sadness

READING AND LANGUAGE

TIME	30 minutes
OBJECTIVE	Infer a character's feeling from words and actions and cite one detail as evidence.
STUDENT PRODUCT	A feeling-and-evidence response about Benny at two moments in the story.
MATERIALS	The book; printable feeling-and-evidence organizer.
BOOK EVIDENCE	The narration shows Benny's sadness through a shaky voice, a faded smile, stillness, and his response when Theo returns.

Lesson sequence

Read ·	5 min
--------	-------

Reread the first selected moment. Notice what Benny says, how his voice sounds, and what his body does.

Infer ·	7 min
---------	-------

Name the feeling without searching for a printed feeling word.

Prove ·	8 min
---------	-------

Complete: “Benny feels ____ because the text shows ____.”

Compare ·	6 min
-----------	-------

Reread the reunion. Identify what changes and choose one detail that proves the change.

Close ·	4 min
---------	-------

Explain how an author can show a feeling without naming it.

WATCH FOR

A reasonable feeling word still needs textual evidence. Do not accept an unsupported label.

SUPPORT

Offer two feeling choices and reread one evidence sentence.

EXTEND

Explain why “usually” matters in the description of Benny.

Student page · A Shaky Voice: How the Book Shows

Sadness

Name: _____ Date: _____

TODAY I WILL

Infer a character’s feeling from words and actions and cite one detail as evidence.

WHEN THEO IS MISSING

BENNY FEELS...

THE BOOK SHOWS...

THIS DETAIL PROVES THE FEELING BECAUSE...

WHEN THEO RETURNS

BENNY FEELS...

THE BOOK SHOWS...

THIS DETAIL PROVES THE FEELING BECAUSE...

Teacher key · A Shaky Voice: How the Book Shows Sadness

EXPECTED RESPONSE

First moment: sad, worried, or discouraged, supported by his shaky voice, faded smile, or stillness.

Reunion: relieved or happy, supported by his changed words, voice, expression, or actions when Theo returns.

WHAT MAKES THE RESPONSE SECURE

The student completes the stated action accurately and explains it with visible evidence from the counters, cards, organizer, or book. Accept oral responses, teacher scribing, manipulatives, drawing, or pointing when the mode preserves the mathematical or reading demand.

COMMON CORRECTION

A reasonable feeling word still needs textual evidence. Do not accept an unsupported label.

7. I'll Make Another One: Words People Use to Help

READING AND LANGUAGE

TIME	30 minutes
OBJECTIVE	Distinguish an offer, a request, and a thank-you response in dialogue.
STUDENT PRODUCT	A correctly performed three-line dialogue using all three speech purposes.
MATERIALS	The book; printable OFFER, REQUEST, and THANKS cards; printable dialogue cards.
BOOK EVIDENCE	Characters offer to make signs, ask others for help, thank one another, and respond in direct dialogue.

Lesson sequence

Listen ·	5 min
----------	-------

Read three brief exchanges from the book. Students signal offer, request, or thanks.

Find clues · 7 min Notice words and punctuation that help reveal each speaker's purpose.

Sort ·	7 min
--------	-------

Sort the printable dialogue cards under OFFER, REQUEST, and THANKS. Explain one choice.

Perform ·	7 min
-----------	-------

Partners create and perform a three-line exchange: request, offer, thanks.

Close ·	4 min
---------	-------

Name one phrase that makes help sound respectful and clear.

WATCH FOR

"Would you like...?" can be an offer even though it is a question. Attend to purpose, not punctuation alone.

SUPPORT

Use the printed sentence starters and rehearse orally.

EXTEND

Revise a command so it becomes a respectful request.

Student page · I'll Make Another One: Words People Use to Help

Name: _____ Date: _____

TODAY I WILL

Distinguish an offer, a request, and a thank-you response in dialogue.

REQUEST OFFER THANKS

Perform your three-line dialogue. Put a check beside each purpose you used.

- request
- offer
- thanks

Teacher key · I'll Make Another One: Words People Use to Help

EXPECTED RESPONSE

“Could you help me make a sign?” = REQUEST. “I can make another one.” = OFFER. “Thank you for helping.” = THANKS. Accept equivalent lines when their purposes are clear.

WHAT MAKES THE RESPONSE SECURE

The student completes the stated action accurately and explains it with visible evidence from the counters, cards, organizer, or book. Accept oral responses, teacher scribing, manipulatives, drawing, or pointing when the mode preserves the mathematical or reading demand.

COMMON CORRECTION

“Would you like...?” can be an offer even though it is a question. Attend to purpose, not punctuation alone.

8. First, Then, At the End

READING AND LANGUAGE

TIME	30 minutes
OBJECTIVE	Retell the story in order using the central problem, response, and resolution.
STUDENT PRODUCT	A three-part oral or written retell using First, Then, and At the end.
MATERIALS	The book; printable three-part retell organizer.
BOOK EVIDENCE	The plot has a clear problem (Theo is missing), response (signs spread), and resolution (the ice-cream driver returns him).

Lesson sequence

First ·	6 min
---------	-------

Reread the opening. State the problem and identify who is affected.

Then ·	7 min
--------	-------

Select the central middle event that best explains how the community responds.

At the end · 7 min Reread Theo's return. Explain how the driver knew where to bring him.

Retell ·	6 min
----------	-------

Tell the story in three connected sentences using the sequence words.

Close ·	4 min
---------	-------

Remove one part from a sample retell. Explain what important information is missing.

WATCH FOR

A list of events is not yet a focused retell. Require the problem, main response, and resolution.

SUPPORT

Use picture cues and allow an oral retell with teacher scribing.

EXTEND

Add one sentence explaining how the middle events cause the ending.

Student page · First, Then, At the End

Name: _____

_____ TODAY I WILL Retell the story in order using the central problem, response, and resolution.

FIRST What is the problem? Who is affected?

THEN How does the community respond?

AT THE END How is the problem resolved?

Date: _____

Teacher key · First, Then, At the End

EXPECTED RESPONSE

First: Theo is missing and Benny is worried/sad. Then: Benny and the community make and spread lost-dog signs. At the end: an ice-cream driver uses the sign information to return Theo. Accept accurate wording supported by the book.

WHAT MAKES THE RESPONSE SECURE

The student completes the stated action accurately and explains it with visible evidence from the counters, cards, organizer, or book. Accept oral responses, teacher scribing, manipulatives, drawing, or pointing when the mode preserves the mathematical or reading demand.

COMMON CORRECTION

A list of events is not yet a focused retell. Require the problem, main response, and resolution.

Printable resources · Event strips and name cards

Lesson 3: copy one short sign-making event from the book onto each strip, then cut.

EVENT 1

EVENT 2

EVENT 3

EVENT 4

EVENT 5

Lesson 2: copy roster names exactly, one name per card. Print additional copies as needed.

Printable resources · Dialogue sort cards

Cut apart. Students sort by purpose, then use the blank cards to make their own exchange.

Could you help me make a sign?

I can make another one.

Thank you for helping.

Would you like me to help?

Please pass me the paper.

Thanks! That was kind.
